## That interference problem?

- Feed-thru and Pi filters for mobile, aircraft and marine equipment.
- Ignition and interference filters for use on generators, ammeters, etc.
- Quietone interference filters, for home, industrial and heavyduty electrical equipment.
- Made by C-D, world's largest producer of interference filters.
- Write for Catalog 200 C. Cornell-Dubilier Elec. Corp., So. Plainfield, N. J. Your local Classified Phone Directory lists your nearest C-D jobber.

#### **ELECTRONIC FILTERS**

An electronic filter is an amplifier specially designed to have a selective transmission characteristic. In many applications, this device performs the function of separating desired frequencies from undesired ones more advantageously than do ordinary L-C and R-C filter circuits. Some of the desirable properties of electronic filters are: (1) high input impedance; (2) zero insertion loss, or actual gain; (3) sharper response; (4) elimination of iron-cored coils in some instances with sharper response than can be obtained with ordinary R-C circuits alone; and (5) tuneability in some cases.

The electronic filter is an instrument in itself and usually is used independently. It also is incorporated into other instruments, such as distortion meters, wave analyzers, sound analyzers, noise meters, and frequency meters. Other applications of the electronic filter include electronic control circuits, frequency-selective signalling, tone control, and radio interference elimination.

In most electronic filter circuits, the desired transmission characteristic is obtained by means of negative feedback through a frequency-selective network. In a few others, selective feedback is not used at all, but instead amplification is provided to overcome the insertion loss of a frequency-selective transmission network. Examples of both types are described in this article.

Development and acceptance of the electronic filter has been rapid in recent years. Several commercial models now are available. Low-pass, high-pass, bandpass, and band-suppression types may be obtained with the advantageous feature of continuously-variable tuning, thus providing the laboratory with an invaluable experimental tool and design aid. An important fact is that the electronic filter is relatively simple

and can be built easily by the experimenter.

While it is entirely possible to design electronic filters for radio-frequency use, the greatest field of application for these units has been in the audio spectrum. It is important, therefore, to point out that the circuits described in this article have their principal use in the frequency range 20 to 50,000 cycles.

#### Basic Principle

The block diagrams in Figures 1 and 2 serve to illustrate the basic arrangement of electronic filters. Figure 1 shows the feedback type; Figure 2 the transmission type.

In Figure 2, block B represents a high-gain amplifier having a flat audio response curve. Negative feedback is provided from the output to the input of this amplifier. The feedback voltage is transmitted through a frequencyselective network, D. Obviously, the maximum amount of degeneration (and therefore cancellation of the gain of the amplifier) occurs on those frequencies passed by network D. On frequencies excluded by the network. there is no degenerative feedback and the amplifier operates at full gain. Isolating amplifier stages (A and C) may be provided at the input and output respectively, of amplifier B to prevent external source and load circuits from affecting the frequency-selective feedback network.

From this mode of operation of the feedback amplifier, it is seen that the transmission characteristic of the electronic filter of the feedback type is the reverse of the frequency characteristic of the feedback network. For example, if a null network is used in the feedback loop, there will be no degeneration at the null frequency (since that frequency is not transmitted back to

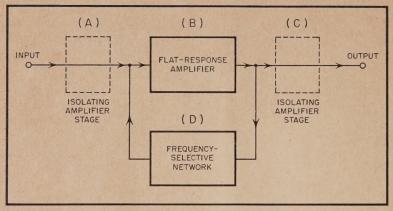

Fig. 1. Basic Feedback-Type Electronic Filter.

the amplifier input) and the amplifier will have full gain at that frequency. On each side of the null frequency, amplifier gain will be reduced by degeneration, and the amplifier will have reduced or zero transmission. Thus, a null network (band-suppression filter) in the feedback circuit produces a bandpass electronic filter. Similarly, a low-pass feedback network makes a high-pass electronic filter; a high-pass network, a low-pass electronic filter; and a bandpass network, a band-suppression (null-type) electronic filter.

The feedback-type electronic filter usually displays sharper filter action than is obtained with the frequency-selective network (itself a non-electronic filter) alone. This is because the

amplification provided by the electronic circuit produces sharp and rapid attenuation of all undesired frequencies in the operating range. Because amplification sharpens the response of the electronic filter, the feedback loop should include as many stages as practicable. In the process of design, due attention must be paid to the phase shift characteristics of the frequency-selective feedback network chosen, in order that signal polarity at desired operating frequencies will be correct for negative feedback and that the possibility of positive feedback and oscillation will be avoided.

Operation of the transmission-type electronic filter (See Figure 2) is the opposite of that of the feedback type.

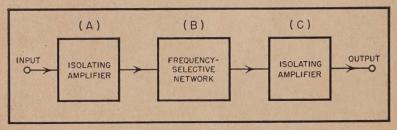

Fig. 2. Basic Transmission-Type Electronic Filter.

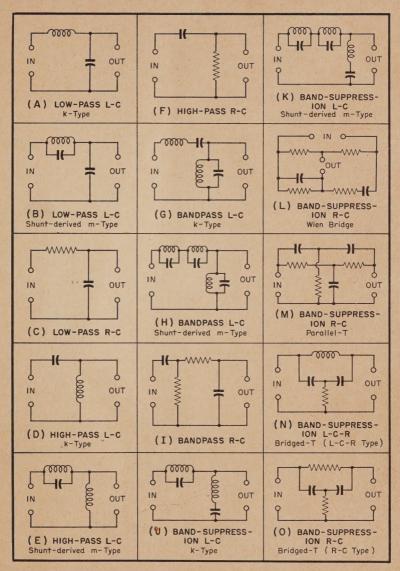

Fig. 3. Frequency-Selective Networks for Inclusion in Electronic Filters.

This latter type (Figure 2) has the same transmission characteristic as that of the frequency-selective network itself. Thus, when a low-pass filter circuit is used as the frequency-selective network, an electronic low-pass filter is obtained. The amplifier stages serve only to provide high-impedance input isolation from source and load devices, and to overcome the insertion loss which would result if the network were used alone. Negative feedback often is incorporated into the amplifier to provide stability, linearity, and flat frequency response, but the frequencyselective network is not a part of such a feedback circuit.

The transmission-type electronic filter has the disadvantage that its frequency characteristics never are any better than those of the frequency-selective network itself. In many applications, however, this will be of little consequence.

Each type of electronic filter has the ability to provide overall amplification. This is an important property, since insertion loss is a noteworthy disadvantage of non-electronic filters. Where desired, the overall gain may be adjusted for zero insertion loss (output and input signal voltages equal in amplitude), or any desired amount of amplification may be obtained. In many applications, the electronic filter serves the dual purpose of filtering and amplification.

The other outstanding advantage of high input impedance provides efficient filtering in applications where loading due to a filter must be kept to a minimum, and where suitable high-impedance non-electronic filters would entail costly design and construction. It also enables the use of a single set of frequency-determining components for a wide variety of source and load impedances. This is not possible with non-electronic filters.

In many cases where resistances and capacitances are used in the frequencyselective networks of electronic filters of both types, tuning may be accomplished by continuously varying either the R or C components. Tuning is a feature not available in audio-frequency filters of the non-electronic type because of inability to vary the large coils and capacitors except over very narrow ranges.

Resistance and capacitance may be employed in feedback-type electronic filters to secure filter characteristics possible in non-electronic circuits only with expensive coils. The feedback-type electronic filter also improves operation of the L-C-type circuit, when the latter is incorporated into the feedback loop.

#### Practical Examples

Any desired combination of elements may be fit into the arrangements shown in block diagram in Figures 1 and 2. Individual requirements will determine, for example, the type of frequency-selective network and amout of amplification which will be used. The "best" combination will depend upon the conditions of application.

Figure 3 shows fifteen of the common frequency-selective networks normally employed as filters and which may be incorporated into the feedback or transmission paths of electronic filters. Both L-C and R-C circuits are shown. In each instance, operation of two or more of the network sections will give improved performance.

In the conventional filter sections, both k-type and m-type circuits are shown. While the shunt-derived m-type has been chosen for presentation in Figure 3, the series-derived type is equally applicable. Filter design formulae, for determining the L and C values required for various operating frequencies, may be obtained from the various radio handbooks. The following issues of the C-D CAPACITOR contain information regarding selective network characteristics: January 1949, September 1951, and November 1951.

Figures 4 to 8 show, for illustration, typical skeleton circuits for electronic filters. In this space, it is not possible to describe every workable combina-

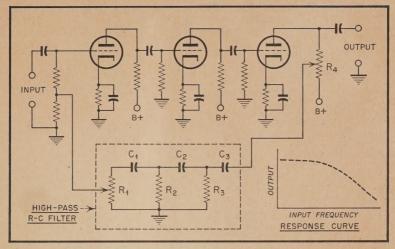

Fig. 4. Low-Pass Electronic Filter.

tion which might be made. The circuits selected typify the general schemes. For simplicity, triodes are indicated, but the reader will understand that other types may be more suitable.

Low-Pass. A low-pass transmission characteristic is obtained in Figure 4 by returning negative feedback through a high-pass R-C network (C<sub>1</sub>, C<sub>2</sub>, C<sub>3</sub>, R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub>). The "fixed-tune" potentiometer, R<sub>1</sub>, selects the maximum desired amount of feedback. Potentiometer R<sub>1</sub> (which is part of the filter network) then permits the feedback voltage applied to the grid of the first tube to be varied. R<sub>1</sub> thus becomes a "sharpness" control.

High-Pass. High-pass transmission is obtained in the circuit in Figure 5 by returning negative feedback through a low-pass R-C network (C<sub>1</sub>, C<sub>2</sub>, R<sub>1</sub>, R<sub>2</sub>). Otherwise, the circuit is identical with Figure 4. Capacitor C<sub>3</sub> is needed to isolate the grid of the first tube from the plate voltage of the last tube.

Bandpass. Figures 6 and 7 show simple bandpass electronic filters. In both examples, the bandpass transmission

characteristic is obtained by returning negative feedback through a null (band-suppression) network. In Figure 6, the network is a parallel-T circuit ( $C_2$ ,  $C_3$ ,  $C_4$ ,  $R_1$ ,  $R_2$ ,  $R_3$ ); and in Figure 7, a bridged-T circuit ( $C_4$ ,  $C_2$ -L, R) is used.  $C_4$  and  $C_5$  in Figure 6, and  $C_3$  in Figure 7 are isolating capacitors.

Note the increased sharpness (narrower bandwidth) of the response curve in Figure 7, as compared with the one in Figure 6. This sharper response is due to the higher Q of the feedback network in Figure 7, L-C networks normally providing higher Q than R-C networks for the same frequencies.

Band-Suppression. Figure 8 shows one type of band-suppression electronic filter. Here, a Wien bridge null network is inserted between the two amplifier stages. The amplifier accordingly transmits all frequencies except the null frequency of the network and the relatively narrow band on each side of that frequency. The input amplifier stage provides isolation and high-impedance input, while the output ampli-

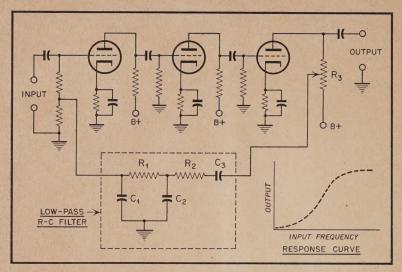

Fig. 5. High-Pass Electronic Filter.

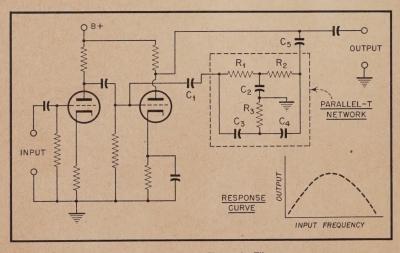

Fig. 6. Bandpass Electronic Filter.

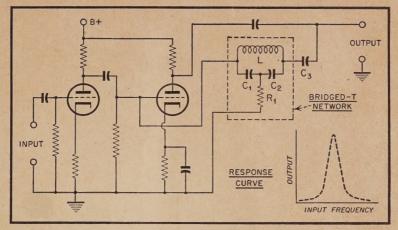

Fig. 7. Bandpass Electronic Filter.

fier supplies gain to overcome losses in the null network and at the same time provides output isolation.

#### Isolation

The circuits shown have been simplified for the sake of clarity. Nevertheless, they are practical and correct.

As indicated in the block diagram in Figure 1, however, an isolating amplifier stage at both input and output is advantageous. Such stages will provide isolation from source and load circuits when added to either of the electronic filter circuits shown in Figures 4 to 7.

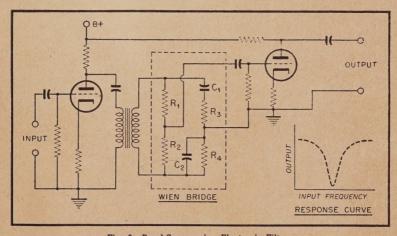

Fig. 8. Band-Suppression Electronic Filter.

The SMART, NEW way to buy your

#### **C-D RED SEAL Vibrators**

#### in the RE-USABLE Plastic Vibrator Kit

You get the re-usable plastic box FREE with the nine vibrators

You get the best vibrators money can buy

You get in one purchase the 5 types that serve over 60% of the popular replacement requirements Save time ... with the convenient C-D VIBRATOR KIT that gives you 9 vibrators in 5 types PLUS a sturdy transparent plastic box with a hinged cover and dividers that has dozens of uses around the shop and at home. The assortment includes two 5300; two 5301; two 5326; two 5342 and one 5335 — all with 5 big POINTS of superior construction: (1) all-riveted assembly, (2) beveled counterweight, (3) shock absorber lead design, (4) air-gap insulated mounting screws, (5) improved sponge rubber cushioning - 5 PROMISES of superior performance in service.

Please PRINT or TYPE your Ad clearly and limit it to 40 words including your name and address.

If you have a "CHANGE OF AD-DRESS" — give both your OLD and NEW and mark your request "For C-D Capacitor Mailing List." Ads are published in the order received and as space permits. If your Ad does not appear in one of the two issues following the month in which you submit your Ad — please RESUBMIT it.

CORNELL-DUBILIER ELECTRIC CORP. reserves the right to edit your Ad to conform to its policies and is the final judge of its suitability for publication. We do not assume any liability or responsibility for any transaction that results. Make your deal direct with the advertiser listed in the Ad.

- SELL OR SWAP.—Vomax 900 VTVM like new \$55; Sparx 905A sig. tracer, never used \$35; Rider Man. 1-9, 4 folders Sam's \$65. Want sporting eqpt. Dick Miller, 1934 E. Broadway, Muskegon, Mich.
- TRADE—2 Triplett thermocoupled ammeters like new; one mod. 441, scale 0-1; one mod. 347A, 0-1. Need d.c. milliammeter, 0-500 mills and ADC meter 0 to 250 milliammeter, 2" type GE or similar, A. P. Rabito, 2835 Paris Ave., New Orleans, La.
- FOR SALE—Sam's Photo Facts 12-14, 37, 39-41, 43, 44, all in orig. envelopes, 75c ea. postpaid. Nobo Co., 429 High St., W. Mediord, Mass.
- WANTED—GE mod. E91 radio less cabinet; Stancor P-6034 or Thordarson T-41187 transformer. Also 10" and 12" LP 33 records. C. Alexander, 14 Ticknor St., So. Boston 27, Mass.
- SALE OR SWAP—Wood toy business; boy's motor bike; auto sets; short wave sets and parts; broadcast sets and parts; 7" and 12" TV sets. Modern TV Service, 185 No. 15th St., Bloomfield, N. J.
- FOR SALE—All makes of standard radio chassis. Send stamped envelope. Wand 2½" square d.c. milliampere meters, 0-50, 0-100 milliamperes, perfect. Louis A. Goldstone, 1279 Sheridan Ave., Bronx 56, New York.

- FOR SALE—Complete advanced Radio Engineering Course by CREI, exc. cond., \$25. Fred Brown, 157 Walsh St., Medford, Mass.
- FOR SALE—BC-224-F rec., 110 v. operation, 1500 to 18,000 kc, \$55. Arnold L. Halpern, 450 Brighton Ave., Long Branch, N. J.
- FOR SALE—630ts, good cond. \$55; few TV console cabinets to fit 21" tube. Will not ship. J. Wasiewicz, 74 Canterbury Rd., White Plains, N. Y.
- FOR SALE—Complete outdoor-indoor P.A. sound system—Masco ampl. 110 a.c. or 6 v. d.c., 2 Shuredyn mikes and stands, 4 University horns, 2 wall baffle 12" spkrs., 15 w. ampl. Ralph Chasse, 24 Hobson St., Methuen, Mass.
- WANTED—Capehart record changer 331/3 turnover. Write best offer to Dr. J. Ruegsegger, 222 Holt Dr., Pearl River, N. Y.
- WANTED—Tubes: 2A7, 6A5, 6AD7, 6B5, 6B6, 6J5, 024. State cond. and prices, must be bargains. Walter J. Bartell, 1107 N. Western Ave., Chicago 22, Ill.
- SELL OR SWAP—Duo Vue projector, like new, with or without 10" 630 type TV, uort. 78 auto record player; port. 14 h.p. paint spray outfit. Want TV test eqpt., port. 78 auto record player; port. 1/4 h.p. 690 Saw Mill River Rd., Ardsley, N. Y.

- SALE OR TRADE—GE self-charge portable radio mod. no. 250 in A-1 cond. Want a mutual conductance Hickok or Triplett in good cond. Manuel Perez, 119 9th Ave., N. Y. 11, N. Y.
- SWAP—Approx. \$5,000 stock in tubes and condensers at regular net prices. Wild accept shop eqpt., trailer, boat, California land property, or what have you? Radio W-6-00B, 4254 Niagara Avenue, San Diego 7, Calif.
- FOR SALE—NRI Radio-TV course comp., books only, 4x5 view camera. Best cash offer or trade for Rider Man. 6-15 in like new cond. Charles W. Greene, Rt. 2, Abbeville, S. C.
- WANTED—35mm camera, 2 to 3.5 lens and internal sync-flash. W. Firehammer, 2738 Earl St., Niles, Mich.
- WANTED—Instruction booklet for Supreme Vedolyzer mod. 560-A. Will pay \$1. R. W. Landry, 2600 Pauger St., New Orleans, La.
- SELL OR TRADE—Triplett 2413 tube checker with new tube charts; tubes in orig. cartons; condensers, radio books. Want photo enlarger for 35mm and 21/4 x 31/4, negatives. Charles R. Johnston, 28 W. 7th Ave., Tarentum, Pa.
- FOR SALE—Precision E-200-C sig, gen. and 610 P tube tester; radio books and a course from National radio schools and radio parts and tubes. Write for list and prices. Arthur Dykeman, West 4206 Sanson, Spokane 15, Wash.
- SELL OR SWAP—NRI Radio and TV course less experiment kits. Want battery eliminator or good tube checker, pref. Precision or Jackson. Donald Walker, 125 Guess St., Greenville, S. C.
- FOR SALE—C-D trans. cap. .01 mfd., 2500 w.v., overload relay 140 M.A. trip plunger reset, 0-20 v.d.c. D.Arsonval type voltmeter. R & E Shop, 3554 N. 23rd St., Phila. 40, Pa.
- SELL OR TRADE—Webster Chicago wire recorder and 7 spools wire, exc. cond., for best offer or comm. rec., ham gear. L. A. Josephson, 313 N. McLean St., Bloomington, Ill.
- FOR SALE—Astatic AT1 "Channel Chief"
  4 tube TV booster, perf. cond. \$22.50;
  two bay Vee-D-X channel 5 TV antenna
  with matching section, very good cond.
  \$15; both for \$35. John E. Farrier, 220
  Bird Ave., Sidney, N. Y.

- SALE OR TRADE—4 Motorola fuel pumps and defrosters in orig. cartons, for Motorola heater; Pre-cis-ion fuel pump tester. Lot \$10 or make offer on items or trade for usable 78 or 45 port. phono or mike. Sahr Radio, Fairmont, Minn.
- FOR SALE—Heathkit R.F. sig. gen. mod. SG-6 \$19.50 and VTVM mod. V-4A \$23.50 assembled. Frank Coleman, 18709 St. Marys, Detroit 35, Mich.
- FOR SALE—GE trans.-rec. BC-645-A conv. for a. c. and phone on the 420-500 mc. band; instructions, schematic less power supply \$30. John Halchak, 92 Lee Park Ave., Wilkes-Barre, Pa.
- WANTED—Sam's PhotoFacts 1-100, or what have you? D. C. Watts, E 2407 Gordon Ave., Spokane, Wash.
- SALE OR TRADE—Table model W.E. diathermy, used very little. Convertible to transmitter; make reas. offer. Want TV booster, test eqpt. or radios. A. Schlegel, 353 E. 27th St., Paterson, N. J.
- SALE OR SWAP—Supreme tube tester mod. 589A with adapters for TV tubes; Supreme sig. gen. 576; Feilers stetescope TS3; VOM E. M. C. 101B. Name your price. John Beechan, Box 97, Cairnbrook, Pa.
- WANTED—Spare ART13 modulation trans. (811 to 813) for compact portable rig. State details. Prefer swap or swap plus cash deal. Antone L. Oliveira, 94 Potomska St., New Bedford, Mass.
- SELL OR TRADE—Webster 78 rpm auto. record changer, 2 27" steel table racks, 829 two meter final, 750-350 v. dual power supply, spare ham gear. Want TV set. George D. Pixley, 607 6th Ave. S.E., Cedar Rapids, Iowa.
- FOR SALE—Precision sweep gen. mod. E-400 with instr. book and cables; 2 crystals, 2000 kc.-10.7 meg.; cost \$131.81. Will take first M.O. for \$75. FOB. Victor Sipes, 1146 7th St., New Kensington, Pa.
- SALE OR SWAP—'41 Plymouth radio; 3/16" electric drill; 2 18 tube Midwest chassis (working), 12 v. Dodge gen.; 2 P. A. driving units, 6 v. field. Need port. typewriter or what have you? Stanley J Zuchora, 2748 Meade St., Detroit 12, Mich.
- FOR SALE—Rider Man. 7, 9, 11, 12, 13, 14; Gernsback 1-5; books, spkrs; S-38B like new \$39; S-40A like new \$63; xmtr 75-100 w., comp. \$39. E. Tischler, 56 Carey Ave., Wilkes-Barre, Pa.

- FOR SALE—Bliley xtal gen., NRI sig. tracer, Precision E-200, Riders 1-5 abr. NRI Man. no. 1. All above \$25 ea.; BC-191, RA-34. Need .22 cal. pistol Meissner VFO. Jim Wright, 2319 E. Independence, Phoenix, Ariz.
- SWAP—German telescope gun sight for good tube checker with noise test. Ralph Hunter, Rt. 1, Alexander, N. C.
- WANTED—Rider Man. 1-5 in good cond. Will pay cash. Ezra Bond, Bonesteel, So. Dak.
- FOR SALE—2 meter trans-receiver, similar to Tr 4. Best offer. John R. Willis, Passaic Ave., Caldwell, N. J.
- SELL OR TRADE—Canadian antenna impedance matching analyzer, to be used between transmitter and antenna. Save in taking all your subscriptions new and renewal to any magazine in one letter. A. Altas, Box 5, Levis, PQ, Canada.
- FOR SALE—NRI sig. tracer mod. 33; NRI sig. gen. mod. 88; NRI V.O.M.A. mod. 45; perf. cond., all for \$100. William S. Smith, 49 S. Chester Pike, Glenolden, Pa.
- FOR SALE—National Schools Comp. Radio, TV & Electronics Course, less experiments \$25; Feiler TS-3AK sig. tracer with oper. instr., like new \$25. Kenneth Guthrie, Reasnor, Iowa.
- SELL OR TRADE—Price Tenna-Trailer; Dumont 274 scope; Triplett 2432 sig. gen.; Hickok 156 traceometer; McMurdo-Silver 909 sweep gen.; Photofacts 27-100; Preceptor B tube tester; all like new. Want Simpson 479 sig. gen or Hickok 610-A. G. W. Aulabaugh, 1133 Wild St., Sycamore, Ill.
- FOR SALE—300 w. transmitter with 10 m. coils, P.P. 35 tg/s, 811 modulators, Millen exciter, individual power supplies in 6' rack with diagram, \$80. Gordon Hopper, 75 Kendall Ave., Framingham, Mass.
- **WANTED**—NRI sig tracer mod. 33 or 34; state price in reply. R & D Radio & Appliance Service, 110 S. Union St., Dodgeville, Wis.
- SWAP—Pilotuner like new; Utah 12 in PM, hardly used; Universal 100 sig. gen., needs slight repairs. Want old Glenn Miller records in good cond. S. R. Parker, 40 Washington, Northampton, Mass.
- SWAP—2 833A's, like new, for 4-250A with socket and blower. Louis D. Welsh. RFD 6, Kokomo, Ind.

- SALE OR TRADE—BC-946-B rec., like new, with schematic; Navy rec., COL-46159, range 1500-12,000 k.c.; Supreme 562 siggen and audolyzer; Supreme 504-A tube tester. Crowl Radio Service, Welsh, La.
- FOR SALE—Telicon projection TV, 231/2 x 171/2"; picture in working order; uses 5TP4 C-R tube; push pull audio stages, 12" P.M. speaker, \$50. J. Domino, 58-81 Maspeth Ave., Maspeth, N. Y.
- FOR SALE—Hallicrafter SX 42 and R-42 speaker \$200; NRI prof. sig. tracer \$40; both exc. cond. Walter E. Niemiec, Fairway Dr., New Hartford, N. Y.
- FOR SALE—SX28, spkr inc.; 35mm Mercury F2 lens; 800 vdc 300 mil power supply; incomplete ECO; loads of ham gear. NYC buyers in person only. Frank Morretta, 746 Oakland Pl., Bronx, NYC, N. Y.
- WANTED—25B5 and 25N6A tubes. News' Radio & Electric, R 3, Dixon, Ky.
- SWAP—BC 453A like new, 150 to 550, pr 814's for Bud, Viking VFO. Hammond trans filament 110-230 input, 6.3 CT @ 14 amp., 6.3 @ 4 amp., 6.3 at 3 amp., 6.3 at 1 amp., 5 at 6 amp., 2.5 at 3 amp., 6.3 at 1.3 amp., size 61/2x51/2x51/2 for gear. John L. Gifford, 1412 N. Manhattan, Amarillo, Tex.
- WANTED—Navy Selsyns, types 1F, 1G, 1CT, 5F, 5G, 6G, 7G, etc.; Autosyns: AY1, AY5, AY101D, AY201, etc.; tubes, test eqpt., Sig. Corps eqpt. Send lists, prices. A. L. Berg, 108 Pearl St., Boston, 10, Mass.
- SALE OR TRADE—10 x 80 German FA officer's binocular set mounted on tripod, slightly used, orig. value over \$400. Sell or trade for radio or test eapt. S. J. Hart, PO Box 700, Whiteville, N. C.
- FOR SALE—Rider Manuals 2-13, in perf. shape \$75. Globe Radio Service, 306 Stewart St., Toronto, Ohio.
- FOR SALE—Sam's Photofacts 1-77, comp., A-1 cond., filed alphabetically in bulk, instead of binders; half price. M. P. Brodie, 1428 NW. 98th St., Miami, Fla.
- WANTED—TV test egpt. State cond., age, etc., reasonable. Have scope. Albert D. Speaker, Box 702, Huntington Park, Calif.
- SERVICES—Will assemble most kits for \$5. Rec's., oscilloscopes, and amplifiers with preamplifiers \$10. Will ship free to your address. Send kits to: Bert Willke, 3827 Wallwerth, Toledo 12, Ohio.

- SELL OR SWAP—Globe King, NC183, HT-18, modulation monitor, meters, parts, beams. Free list. 5000 parts less than 25% of list. Wm. T. Clark, 3664 Derry St., Harrisburg, Pa.
- FOR SALE—Riders 2, 3, 12-18; TV man. 1-4; record changer man. P.A. vol. 1, all exc. cond. \$165; Hickok TV gen. mod. 610; scope mod. 505; VTVM mod. 209; pattern gen. mod. 620; Precision analyzer mod. 620, all exc. cond. Albert Corideo, 51 Ridgefield Ave., Waterbury 4, Conn.
- FOR SALE—Repair business setup; tube tester, multimeter, generators, marker, tracer, scope, tubes, condensers, resistors, etc., all like new. William Bashta, 17741 Bullock, Encino, Calif.
- FOR SALE—GI port. 3 speed rec. changer with 4 tube amp., 8" spkr and mike \$60. 8 tube 3 band Delco 6 v. radio \$40. R. L. Firmature, PO Box 528, Lake Charles, La.
- SALE OR SWAP—Brush BK 414 recorder; Stancor ST. 203A; Gonset 10-11 noise limiter, Premax 10 m. whip; Telvar 760 coils 10-80 antenna tuner all coils 10-80; Meissner EX sig. shifter extra 160 meter strip; all A-1 cond. Edward B. Schofield, 9031 Ft. Hamilton Pkwy., Bklyn. 9, N. Y.
- FOR SALE—Rider Man. 1-13, like new, and Rider record changer book \$80; Dialbelts, speakers, resistors, condensers, etc. Write for list. Max Hollmann, 26 Post Ave., New York 34, N.Y.
- WANTED—RCA mod. K80 radio chassis and 1947 Hudson custom built radio. State price and cond. in first letter. John J. Hartenstein, 1 Fifth Ave., Brooklyn, Baltimore 25, Md.
- FOR SALE—Heathkit sig. gen. SG-6 \$16; Heathkit TS-2 TV sweep gen., like new \$35. Richard M. Cahill, 130 Rombout Ave., Beacon, N. Y.
- FOR SALE—BC-221 freq. meter, orig. calibration charts, bad case \$65; SCR522 transmitter and rec., usable rack and case \$35; some BC-375 tuning units. R. Naugle, Box 1686, Fayetteville, Ark.
- SELL OR TRADE—RCA floor mod. TV set; Hunter Cyclemaster 20A exciter; National NC-183 rec.; 3000 and 2000 v. power supplies; meters; crystals; George Pasquale, 9421 Thornhill Rd., Silver Spring, Md.
- WANTED—Any back issues of Electrical Experimenter magazine from 1913 to 1919. Leland I. Anderson, 127 Seymour Ave., S.E., Minneapolis 14, Minn.

- SALE OR SWAP—7" Emerson port. TV set in exc. cond., \$35 or swap for test eapt. Pat Blamey, New Straitsville, Ohio.
- FOR SALE—Speco sig. tracer amp. mod. STAP., exc. cond.; tracer probe, instr. book inc. Will ship exp. prepaid up to 1,000 miles from Phila., Pa. for \$25 cash with order. Louis Leibovitz, 3835 Cambridge St., Philadelphia, Pa.
- WANTED—Mutual conductance tube tester. Will trade Eico and cash. Will pay \$5 per vol. for Rider Man. from no. 13 up. John A. Kimm, 934 Judson St., Evansville 13. Ind.
